

Amendment(s) to the Specification:

After the paragraph beginning at page 2, line 14, please insert the following three new paragraphs:

The designation IP refers to an electrical standard developed by the European Committee for Electrotechnical Standardization (CENELEC). In any designation in which two numbers follow the letters IP, the first number describes the level of protection from solid objects, and the second number describes the level of protection from liquids.

In the designation IP54, the first number 5 means dust protected, i.e., ingress of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the apparatus or to impair safety. The second number 4 means protection against splashing water, i.e., water splashed against the enclosure from any direction shall have no harmful effects.

In the designation IP67, the first number 6 means dust tight, i.e., no ingress of dust, and the second number 7 means protection against the effects of temporary immersion in water, i.e., ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed 1 meter in water under standardized conditions of pressure and time.
